

Opening detector, 2m, 2-core, white

Art. no. FU7350W

Page 1 of 1

- For reliable perimeter protection
- For protecting doors and windows
- Suitable for flush and surface mounting

The opening detector is a magnetic contact for protecting doors and windows. Unauthorised opening is detected and reported to the alarm center. The opening detector consists of a magnetic contact (reed) and a magnet. These are fitted parallel, in front of, or at right angles to each other at a maximum distance of 13 mm apart. The electric circuit of this NC opening detector is normally closed (NC). If the distance between the reed and the magnet increases, the circuit is broken and an alarm reported. The optimum installation location is the middle of the door or window frame. It can also be fitted to the bottom of the window frame if a particular window with a magnetic contact is to be tilted open. The detector is suitable for both flush and surface-mounted installation. The opening detector is available in white and brown.

Technical Data:

Dimensions	(WxHxD) 11x12x48 mm
Connections	NC, max. contact capacity 100 V/5 W/0.05 A
Width	11 mm
Type of detection	Magnetic field measurement
Stray-field protection	No
Housing material	ABS

Height	12 mm
Cable type	2-core
Cable length	2 m
Length	48 mm
Installation location	Integration / surface mounting
Sensor type	Reed contact
